Scheduling Capacity Summary

METHODOLOGY & ASSUMPTIONS

- The Summer 2026 Scheduling Season terminal capacity parameters are based upon a methodology consistent with prior capacity declarations (including the Summer 2025 capacity declaration). These parameters are based upon the following:
 - An analytical assessment of the processes using previously sampled data and industry metrics.
 - Periodic on-site observations to understand the following:
 - Operational specificities
 - Gather stakeholder input
 - Changes in airport operations
- The capacities resulting from this analysis are expressed for the entire Summer 2026 Scheduling Season. These include variations in capacity due to construction activities, as well as infrastructure and operational improvements.
- The analysis considers the impact of airline moves, including the 2025 Redetermination.
- Capacities assume that Summer 2025 is representative of traffic growth at Common Use facilities (i.e. consistent domestic/international split, peaking profile, etc.).
- Exhibits and capacities shown in this document are representative of anticipated conditions in Summer 2026. These may vary compared with current conditions.
